JBoss AS 7 Configuration, Deployment and Administration ...

Deployment Modes. The filesystem deployment scanner in JBoss AS 7 and later works differently from previous JBoss AS releases. The scanner can operate in one of two different modes, depending on whether it will directly monitor the deployment content in order to decide to deploy (or redeploy) it. Auto-deploy mode:

Application deployment - JBoss AS 7.2

JBoss AS 7.0. DataSource configuration. Datasources are configured through the datasources subsystem. Declaring a new datasource consists of two separate steps: You would need to provide a JDBC driver and define a datasource that references the driver you installed. JDBC Driver Installation.

DataSource configuration - JBoss AS 7.0

Start JBoss AS 7 and make sure the OSGi Framework is active; the framework can be activated by deploying an OSGi bundle into JBoss AS 7 or by setting its activation mode to eager. Then open a web browser and access: http://localhost:8090/jboss-osgi. A log-in dialog appears.

Subsystem configuration - JBoss AS 7.0

Enables the deployment of .SAR archives containing MBean services, as supported by previous versions of JBoss Application Server . Threads. This subsystem is being deprecated and will not be part of the next release . Weld. Enables the deployment and functionality of CDI applications

Simple configuration subsystems - JBoss AS 7.0

JMS Queues and Topics. JMS queues and topics are sub resources of the messaging subsystem. They are defined in the jms-destinations section. One can define either a jms-queue or jms-topic.Each destination must be given a name and contain at least one entry element.. Each entry refers to a JNDI name of the queue or topic. Keep in mind that any jms-queue or jms-topic which needs to be accessed ...

Messaging configuration - JBoss AS 7.2

In case you installed driver as a deployment, the driver tag in datasource definition should match the deployment file name. As you can see, what we put in this is the actual module name we defined in module.xml under jboss-7.0.0.<release>/modules/com/mysql/main/module.xml. That's all there is to it. The MySQL module is attached as an example.

Data Source Configuration in AS 7 | JBoss.org Content ...

In an EAR the configuration should be in the META-INF directory. In a WAR or JAR deployment the configuration file can be in either the META-INF or WEB-INF/classes directories. The following configuration files are allowed: logging.properties . jboss-logging.properties . log4j.properties . log4j.xml . jboss-log4j.xml
