Preliminary treatment of  
wastewater consists of the  
following steps:

Screening;  
Comminution; Grit  
Removal; Flow

# Download File PDF Preliminary

Equalization; Oil and Grease Removal; Pre-Aeration; 1. Screening. The first unit operation generally encountered in wastewater treatment plants is screening. A screen is a device with openings, generally of uniform size, that is used to retain solids found in the influent wastewater to the treatment plant.

which should be followed by those involved in the treatment of wastewater. It provides criteria and procedures for the proper management, maintenance, supervision, operation and use of the processes and equipment required in the preliminary treatment of wastewater.

PRELIMINARY

# Download File PDF Preliminary

## TREATMENT

The objective of preliminary treatment is the removal of coarse solids and other large materials often found in raw wastewater. Removal of these materials is necessary to enhance the operation and maintenance of subsequent treatment units.

### 3. Wastewater treatment

Sewage treatment facilities use physical, chemical, and biological processes for water purification. The processes used in these facilities are also categorized as preliminary, primary, secondary, and tertiary. Preliminary and primary stages remove rags and suspended solids.

# Download File PDF Preliminary

Secondary processes  
mainly remove  
suspended and dissolved  
organics.
